

## **Radiology Enterprise Solution** **Working Together as ONE** **to Deliver Improved Healthcare Outcomes**

- ONE** Complete Enterprise Solution encompassing RIS, PACS, Secure Web Referrer Images and Report Delivery domains. No Integration Needed
- ONE** Experienced Support Team for ALL your RIS PACS Questions
- ONE** Streamlined Workflow and Statistics Engine helping to Improve your Patient Experience and Referrer Relationships
- ONE** Configurable Solution for ALL Imaging Organisations from the smallest of Clinics to the largest of Hospital Departments

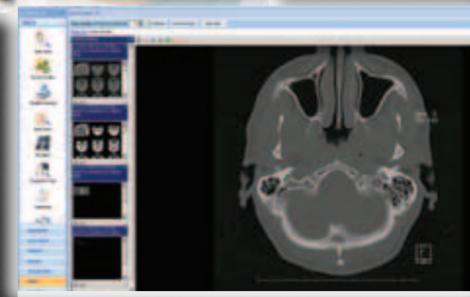

The Contrast ONE Enterprise Solution has been designed to be highly intuitive through the use of modern Windows interfaces and wizards that guide the user through the more complicated processes. This helps reduce both the learning curve for your staff, and the risk of errors. Every RIS and PACS function can be accessed from the one system and the most common workflow functions are only one click away.

Patient Orders and Appointments have been designed to be quick and accurate through the use of simple wizards that guide your reception staff through the order and scheduling process. The Contrast ONE scheduler is exceptionally powerful. It supports all types of resources including equipment, rooms and medical professionals. Not only does Contrast ONE support multiple procedure orders, but more importantly multiple resource procedures reducing your scheduling errors by automatically helping you book all the resources required and giving you full control over your scheduling process.

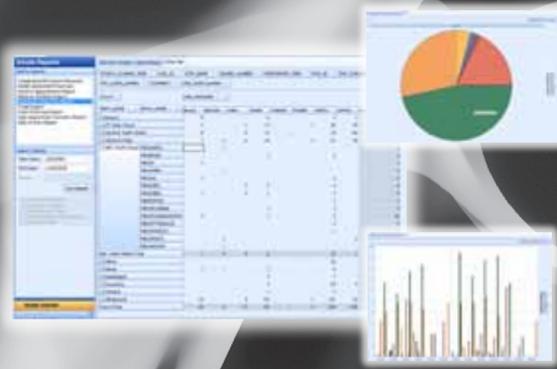

As soon as a patient arrives into your waiting room, the patient experience is seamless. Request and consent forms are generated automatically, whilst study and demographic information flow directly through to your modality equipment. The MIT workflow demonstrates the true power of a single enterprise solution, with all the traditional PACS functions available alongside their RIS counterparts. MITs can view their modality worklist, current and prior studies, and can easily add or remove procedures to the request. On completion of the procedures the Medicare item codes associated with the procedures are automatically pre-populated onto the invoice saving both you and the patient valuable time. With inbuilt Medicare Online, the patient experience is completed by providing fast and efficient rebate claiming.

### All The Management Statistics You Need

Need to know "Who Reported What?", "How much have we billed for a particular modality in the last week?" or "Who are my biggest referrers and how are these referral numbers changing over time?". The Contrast One solution contains a powerful management reports module allowing you to obtain the information you need in order to improve your workflow and understand your business better. The statistics are fully customisable. Simply by dragging any column you can present the data grouped or tabulated in whatever way you desire. However, it doesn't stop there. Contrast ONE allows you to easily create mail merged letters from that data to help strengthen your referrer and patient relationships.

The Contrast ONE Enterprise Solution helps you achieve new efficiencies by combining the advantages of a RIS and a PACS into a single business and clinical application. In an increasingly competitive imaging market, we recognise the need for imaging centres to maximise income, enhance profitability and deliver a superior relationship-based service.

The Contrast ONE Enterprise Solution offers customers a powerful set of proven tools that help increase procedure volume, boost profitability, streamline your workflows, foster efficiencies, significantly improve turnaround times, and better serve your referring physicians and patients.

### The Image Gateway and Image Archival

Since the PACS processes are all part of the Contrast ONE solution and use the same database, all your procedure requests and demographic information are ready and waiting to receive the images from the modality. With no interfaces required between systems, missing patient orders or information duplication is a problem of the past. The Contrast PACS processes manage the receiving, routing, storage and archival of the DICOM images. It also intelligently handles all the requests for current and prior images by automatically applying caching mechanisms and compression technologies.

### Report Delivery and Referrer Web Images

The Contrast ONE solution integrates with all major communication service providers. Alternatively, use the Contrast Secure Report Delivery module to make your reports available to referrers and copy doctors at a configurable grace period after report verification.

Contrast ONE also provides your referrers with secure direct access to their patient images through the Contrast Referrer Web Portal. This innovative web portal runs in all major browsers including Internet Explorer, Firefox, Chrome, Safari and mobile devices such as iPhone and Android. Referrers can use tools such as zooming and panning with ease and can even download images to their computer.

### Transcription and Verification

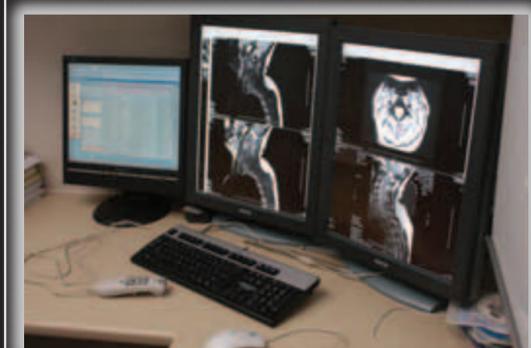

Transcriptionists have access to the latest word processing technologies enabling an efficient path from the reporting process to verification. The radiologist is able to make minor modifications to the transcribed report and verify directly at that time, or add additional dictations and return to the transcriptionist for further updates. Intelligent caching technologies ensure that you can work when and where you need to.

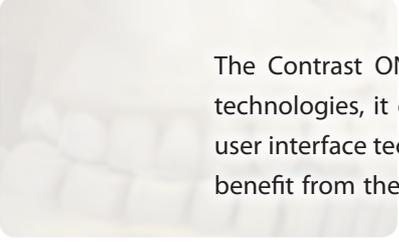

### Improve your Diagnostic Reporting Efficiency

Designed with performance and flexibility in mind, the Contrast Reporting Worklist and Contrast Diagnostic Viewer are the intuitive front ends to the studies you need to report. As soon as the studies have been received from the modality, the images and the scanned documents are pre-cached to your diagnostic workstation, allowing you to efficiently manipulate both current and prior studies, annotate, and finally dictate them quickly and effectively.

Everything you need to report is displayed at that time including all the study details, scanned documents, current and prior images, and the dictation module. Naturally the configuration options and image manipulation functions you expect are at your disposal including hanging protocols, windowing levels, and a myriad of tools to increase your reporting effectiveness.

## Modern and Scalable

The Contrast ONE Enterprise solution has been designed and developed using the latest proven technologies, it can be scaled easily and can grow with your organisation. It is built using the latest user interface technology and a multi-tiered web services architecture. What this means is that you will benefit from the first day with great performance, scalable infrastructure, and that easy to use, stable environment you have been yearning for.

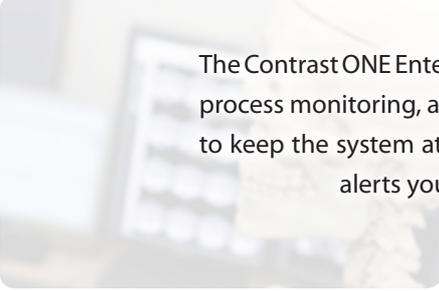

## Affordable

As practicing clinicians and radiology informaticians, we at Contrast Imaging Solutions know that in order to realise the benefits of any RIS PACS solution, its cost needs to be in alignment with the benefits it provides. One of the founding principles of Contrast Imaging Solutions is that the solution and the price need to adapt to your individual circumstances to ensure that you get value out of your solution.

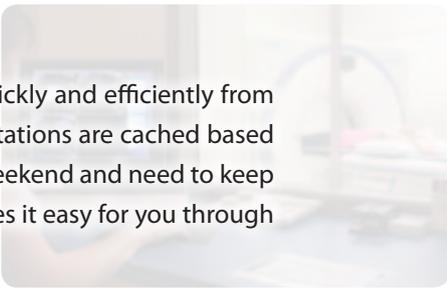

## Robust

The Contrast ONE Enterprise solution constantly monitors all facets of its environment. Storage monitoring, process monitoring, and a number of other system maintenance tasks are always silently working for you to keep the system at its optimum. Should anything be of potential concern, it springs into action and alerts you immediately so the appropriate action can be taken before it becomes a problem.

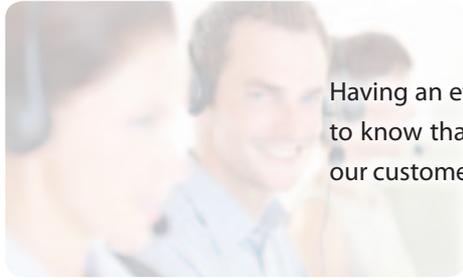

## Work Remotely

The Contrast ONE solution allows you to effortlessly report and transcribe quickly and efficiently from anywhere that you have an internet connection. Images, documents and dictations are cached based on predefined, or your own custom criteria, so if you are out of town for the weekend and need to keep reporting, or if you need to utilise remote transcriptionists, Contrast ONE makes it easy for you through the native web architecture and intelligent caching technology.

## Renowned Support Ethos

Having an efficient, reliable Radiology Enterprise system is only part of the battle. You need to know that help is at hand whenever necessary. No matter what time of day or night, our customers all know and appreciate that the Contrast Imaging Solutions support team are there to help.

## What our Customers say about Contrast Imaging Solutions...

*"We had a number of meetings with Contrast Imaging to discuss our needs and we were surprised to find that they listened! They were very efficient in adding features into their software that were important to us. Dealing with them has been a pleasure. Exciting and stress-free."*

**Dr Sofie Piessens, City Imaging - Ultrasound for Women, East Melbourne**

*"Contrast ONE is a well developed, integrated product that is totally focused on the Australian Radiology market. Their backup and service is the best I have seen in more than 15 years in the teleradiology and RIS/PACS scene."*

**Dr Peter Goodwin, Womens and Breast Imaging, Perth**

*"We needed to ensure that we had the management reports that would help us to improve our business and relationships. The Contrast Solutions helped us get that information and the Contrast team were always happy to customise further as we needed."*

**Graeme Cashin, Practice Manager, Bundaberg Radiology**

*"We selected Contrast Imaging as we needed an affordable imaging solution that interfaced with our existing equipment and systems, and would allow us to remotely report and transcribe our examinations. What we were to pleasantly discover is that the Contrast Imaging team not only successfully delivered that solution at an affordable price, but they continue to help us to improve our workflow through system customisation and just plain helpful advice. Having an Australian company and product rather than an overseas fixed product has allowed us to interact with our supplier to achieve what we wanted and gives us confidence moving forward in the knowledge that we will continue to get delivered the solutions we require as we need them."*

**Dr Joseph Steg, Independent Imaging Group, Melbourne**
