

A Familiar and Easy to Use Interface

Women's Imaging ONE has been designed to be highly intuitive through the use of modern Windows interfaces and wizards that guide the user through the more complicated processes. This reduces the learning curve for your staff and the chance of errors. Every function for full workflow can be accessed from the one system and the most common functions are just one click away.

Patient Orders and Appointments

Patient Orders and Appointments have been designed to be quick and accurate through the use of simple wizards that guide your reception staff through the order and scheduling process. Women's Imaging ONE scheduler is exceptionally powerful. It supports all types of resources including equipment, rooms and technical staff. Not only does it support multiple procedure orders, but also multiple resource procedures reducing your scheduling errors by automatically helping you book all the resources required and giving you full control over your scheduling process.

The Patient Experience

As soon as a patient contacts you to make an appointment, your relationship with the patient commences. Women's Imaging ONE creates a seamless patient experience. SMS appointment reminders can be sent automatically. Request and consent forms are generated, whilst procedure and demographic information flow directly through to your equipment. The Sonographer workflow demonstrates the true power of adopting a single imaging solution; all the traditional PACS functions working harmoniously with workflow queues and the OB/GYN reporting tools. Sonographers can review their modality worklist, and current and prior studies for a patient easily and quickly. Obstetric images can even be sent immediately to the patients mobile phone so they can share in the excitement of their pregnancy with family and friends. On completion of the procedures the Medicare item codes associated with the procedures are automatically pre-populated onto the invoice saving both you and the patient valuable time. With inbuilt Medicare Online, the patient experience is completed by providing fast and efficient rebate claiming.

All The Management Statistics You Need

Want to analyse "How much was billed for all your Nuchal scans in the last week?" or "Who the biggest referrers are and how these numbers changing over time?". Women's Imaging ONE contains a management reports module allowing you to obtain the information you need in order to better understand your business and improve your workflow and processes. The statistics are customisable and frequently used ones can be saved as predefined filters to decrease the time spent manipulating data used on a regular basis. This refined data can be both downloaded to Excel for further analysis or used in a mail merge to help strengthen referrer and patient relationships.

The Women's Imaging ONE Solution helps you achieve new efficiencies by combining the advantages of a complete Practice Management System and a PACS into a single business and clinical application focused specifically on Womens Imaging workflows. In an increasingly competitive imaging market, we recognise the need for Womens Imaging centres to maximise income, enhance profitability and deliver a superior relationship-based service.

Women's Imaging Solution Working as ONE for Improved Healthcare Outcomes

The Women's Imaging ONE Solution offers you a powerful set of proven tools that help increase procedure volume, boost profitability, streamline your workflows, foster efficiencies, improve turnaround times, and better serve your referring physicians and patients.

Workflow Solutions that Make Sense

As the imaging (PACS) processes are embedded within Women's Imaging ONE and utilise the same database, there are no interfaces required between systems. Missing patient requests or duplication between systems are a thing of the past. The Contrast PACS processes manage the receiving, routing, storage and archival of all your images and the automatic linking to your patient requests. All your needs for current and historical images are intelligently handled by applying appropriate caching mechanisms and compression technologies.

Report Delivery & Web Images

Women's Imaging ONE integrates with all major communication service providers. Alternatively, use the Contrast Secure Report Delivery module to make your reports available to referrers and copy doctors at a configurable grace period after report verification.

Women's Imaging ONE also provides your referrers with secure direct access to their patient images through the Contrast Referrer Web Portal. This innovative web portal runs in all major browsers and mobile devices and tablets. Referrers have a full suite of tools including zooming and panning and can download a single image or an entire series to their own desktop for later reference.

Digital Dictation & Direct Report Generation

Transcriptionists have access to the latest word processing technologies enabling an efficient path from the reporting process to verification. The OB/GYN Specialist is able to make minor modifications to the transcribed report and verify directly at that time, or add additional dictations and return to the transcriptionist for further updates. The ability to setup custom templates or structured reports greatly reduces the time spent by the transcriptionist (in some cases virtually to zero) in comparison to importing data from handwritten technologist notes. Intelligent caching technologies ensure that you can work where and when you need to.

Enhanced OB/GYN Reporting

With the ability to have measurements taken and embedded directly to your personalised templates, Women's Imaging ONE allows for complete control of your reporting, while simultaneously reducing the time consolidating the data can take. There is the option of fully or semi automated reporting, through the use of templates or structured reports. This reduces error and inherent risk, increases productivity, and makes hard to read scanned handwritten worksheets a thing of the past.

Modern and Scalable

The Women's Imaging ONE solution has been designed and developed using the latest proven technologies, it can be scaled easily and can grow with your organisation. It is built using the latest user interface technology and a multi-tiered web services architecture. What this means is that you will benefit from the first day with great performance, scalable infrastructure, and that easy to use, stable environment you have been seeking.

Affordable

As practicing clinicians and radiology informaticians, we at Contrast Imaging Solutions know that in order to realise the benefits of any complete workflow solution, its cost needs to be in alignment with the benefits it provides. One of the founding principles of Contrast Imaging Solutions is that the solution and the price need to adapt to your individual circumstances to ensure that you get value out of your solution.

Robust

The Women's Imaging ONE solution constantly monitors all facets of its environment. Storage monitoring, process monitoring, and a number of other system maintenance tasks are always silently working for you to keep the system at its optimum. Should anything be of potential concern, it springs into action and alerts you immediately so the appropriate action can be taken before it becomes a problem.

Work Remotely

The Women's Imaging ONE solution allows you to effortlessly report and transcribe quickly and efficiently from anywhere that you have an internet connection. Images, documents and dictations are cached based on predefined, or your own custom criteria, so if you are out of town for the weekend and need to keep reporting, or if you need to utilise remote transcriptionists, Women's Imaging ONE makes it easy for you through the native web architecture and intelligent caching technology.

Renowned Support Ethos

Having an efficient, reliable Radiology Enterprise system is only part of the battle. You need to know that help is at hand whenever necessary. No matter what time of day or night, our customers all know and appreciate that the Contrast Imaging Solutions support team are there to help.

What our Customers say about Contrast Imaging Solutions...

"We had a number of meetings with Contrast Imaging to discuss our needs and we were surprised to find that they listened! They were very efficient in adding features into their software that were important to us. Dealing with them has been a pleasure. Exciting and stress-free."
Dr Sofie Piessens, City Imaging - Ultrasound for Women, East Melbourne

"Contrast ONE is a well developed, integrated product that is totally focused on the Australian Radiology market. Their backup and service is the best I have seen in more than 15 years in the teleradiology and RIS/PACS scene."
Dr Peter Goodwin, Womens and Breast Imaging, Perth

"Engaging Contrast has been a most rewarding experience for Monash Ultrasound for Women. The integrated RIS and PACS system has delivered smooth administrative workflow, quality viewing and user-friendly imaging software. Most impressive has been the ongoing support from the entire Contrast team. This is a company with high standards, taking pride in a quality product and willing to adapt to the needs of its clients. Responsive to our needs, as Victoria's largest specialist obstetric and gynaecological practice, Contrast has developed a sophisticated reporting package. This investment has demonstrated special interest in and commitment to this field of Women's Health. I would describe the Contrast team as professional, dedicated, innovative and ever supportive. I cannot recommend this company highly enough."
Dr Martha Finn, Monash Ultrasound for Women, Melbourne

ADAPTABLE • AFFORDABLE • PERSONALISED SERVICE

Women's Imaging Solution
Working as ONE for
Improved Healthcare Outcomes

- ONE** Complete Women's Imaging Workflow Solution including a Practice Management System, PACS, Secure Web Referrer Images and Report Delivery function
- ONE** Experienced Support Team for ALL your Questions
- ONE** Streamlined Workflow that focuses on the unique requirements of Women's Imaging helping to Improve your Patient Experience and Referrer Relationships
- ONE** Configurable Solution for ALL Women's Imaging Organisations from the smallest of Clinics to the largest of Hospital Departments
